

Compare FusionAuth to Ping Identity

FusionAuth and Ping Identity are both web-scale identity platforms. Both provide common CIAM features including multi-factor authentication (MFA) and single sign-on (SSO) across multiple applications and devices.

Unlike Okta, FusionAuth is easy to install with just a single command and is 100% free for unlimited users. FusionAuth also supports multiple-platforms and provides flexible deployment options, true data isolation, theme support, localization, and much more.

FusionAuth also installs on any server, anywhere in the world, for complete user data control. Use the chart below to compare our features and read more in our [API documentation](#).
